

# EASI-CELL™ SYSTEM

## THE MULTI-ANGLE, REUSABLE CRASH CUSHION CLUSTER

### OVERVIEW

The EASI-cell™ cluster system is a unique crash cushion solution that provides multi-angle impact protection for hazards in low-speed locations. EASI-cell™ is ideal for high frequency impact sites, such as toll booths, utility poles, railroad crossing signals, traffic lights and many more.

EASI-cell features a series of interconnected “smart plastic” cylinders, made from high molecular weight, high density polyethylene (HMW/HDPE), that can be customized to fit specific applications. The series of cylinders fits against the hazard or a concrete transition from the hazard. During an impact, the reusable “smart plastic” cylinders compress to maximize energy absorption. After a lateral design impact, the cylinders typically regain a high percentage of their original shape and design capacity without maintenance or repair. This cushioning reduces the severity of the impact and helps the driver keep control of the vehicle.

### FEATURES AND BENEFITS

- ▶ Ideal for high-frequency head-on or lateral impact areas.
- ▶ Self-restoring after design lateral impacts-reusable with no replacement parts typically required after many impacts.
- ▶ Custom designed to meet the specific needs of each application
- ▶ Energy-absorbing design reduces severity of impact
- ▶ Low maintenance costs
- ▶ Excellent durability yields outstanding lifecycle costs

During an impact, the reusable “smart plastic” cylinders compress to maximize energy absorption.

## MINIMAL MAINTENANCE AND REFURBISHMENT

Given the durability of the high density polyethylene (HMW/HDPE) cylinders, EASI-cell is designed to withstand a number of impacts without the need for major repairs or parts replenishment. It is selfrestoring after a typical design impact. This durability greatly reduces the time work crews are exposed to traffic and dangerous sites. It also keeps maintenance and refurbishment costs low.

## EASY TO INSTALL

EASI-cell's compact and simple design make installation quick and easy. The EASI-cell system anchors directly to the hazard, to a concrete transition in front of the hazard, or to a rigid steel backup structure.
